Part D

1. BUILT-IN GUARANTEED ANNUITY

This feature and its benefits mentioned below shall be available only if “Variant 2 - With Guaranteed Annuity” variant is chosen at the outset.

Under the “Variant 2 - with guaranteed annuity” variant, at inception, the Policyholder can choose to annuitize a proportion of his vesting benefit at the guaranteed annuity rate under the same product. This proportion can either be 40%, 60% or 80% of the vesting benefit.

On vesting, the Policyholder can decide to annuitize a percentage of his vesting benefit at the guaranteed annuity rate ranging from 0 to the above-mentioned proportion chosen at inception in multiples of 10%.

Definitions for Built-in Guaranteed Annuity

Booster Alignment Factor: The percentage of vesting benefit annuitized at the guaranteed annuity rate on the Vesting Date divided by the chosen proportion at inception.

For example: If at inception, the Policyholder chooses the option to annuitize 40% of the vesting benefit at the guaranteed annuity rate, however on Vesting Date, the Policyholder decides to annuitize only 30% of the vesting benefit at the guaranteed annuity rate, then the Booster Alignment Factor will be equal to 75% (i.e., 30% / 40%).

Vesting Booster Amount: This amount is equal to the vesting benefit multiplied by the vesting booster percentage multiplied by the Booster Alignment Factor. The vesting booster amount shall get added to the vesting benefit.

Annuity Deferment Period: The time starting from the policy Vesting Date, after which annuity becomes payable in arrears.

Annuity Purchase Price: This amount is equal to the percentage of vesting benefit annuitized at the guaranteed annuity rate on the Vesting Date multiplied by the aggregate value of the vesting benefit amount and the vesting booster amount.

The annuity rate guaranteed at inception will apply on Annuity Purchase Price.

Plan Option 1: Future Ready - Single life annuity with return of annuity purchase price with choice of annuity deferment period (starting from the Vesting Date) ranging from 0 to 10 years.

Plan Options 2: Future Secure - Joint life annuity with return of annuity purchase price with choice of annuity deferment period (starting from the Vesting Date) ranging from 0 to 10 years. However, if on vesting only one of the Life Assured is alive, then Single life annuity with return of annuity purchase price with an annuity deferment period ranging from 0 to 10 years can be chosen.

The benefits under the built-in guaranteed annuity are as below:

- Survival Benefit

Annuity shall be payable in arrears post annuity deferment period as per payment frequency chosen, for as long as the annuitant is alive in single life option and as long as either of the annuitants are alive in joint life option.

For Joint Life cases, the annuity rates are gender-agnostic. For Single Life cases, the annuity rates, are applicable for male lives. The rates offered to a female/transgender life will be equal to that of a male life with a three-year age setback.

The frequency of annuity payouts can either be monthly, quarterly, half-yearly or annual as chosen by the Policyholder at the inception. The Policyholder can change the annuity payout frequency anytime during the annuity payout phase by submitting a request at least 30 days before the annuity Policy Anniversary and the change will be effective from the next annuity Policy Anniversary.

The Policyholder has the option to choose the annuity pay out date, which may be different from the annuity Policy Anniversary date. Once this option is chosen by the Policyholder no further annuity pay out date changes will be allowed. Pro-rated annuity shall be payable in the first pay out in case the date is different from the Policy Anniversary date.

For non-annual modes, annuity rates are calculated as the annual annuity rate multiplied by a conversion factor. Annuity instalments for such non-annual modes shall be as provided below:

Frequency	Conversion factor	Annuity Instalment (per frequency)
Half-yearly	98.11%	Conversion Factor x Annual Annuity x $\frac{1}{2}$
Quarterly	97.18%	Conversion Factor x Annual Annuity x $\frac{1}{4}$
Monthly	96.56%	Conversion Factor x Annual Annuity x $\frac{1}{12}$

The annuity conversion factors are derived such that the present value of the modal payments is equal to the present value of the annual payments on prevailing interest rates.

The discount rate shall be reviewed during each subsequent modification of the product. If the discount rate is revised, new annuity conversion factors will be calculated and these will apply to all policies sold after the revision until the next review. The factors are currently computed using a discount rate of Pricing Interest Rate plus 1%

- Death Benefit

Death Benefit is payable as a lump sum to the Nominee, on death of the annuitant in single life option and on later of the deaths of the two annuitants in joint life option. Upon payment of the Death Benefit, the Policy shall terminate and all other benefits shall cease.

Death Benefit shall be equal to

- On death during annuity deferment period: Annuity purchase price accumulated at a rate of 6% p.a. till the date of Death subject to a minimum of 105% of Annuity purchase price
- On death post annuity deferment period: Annuity purchase price accumulated at a rate of 6% p.a. till the end of the annuity deferment period less total annuity payouts made till the date of death floored to 100% of Annuity purchase price

- Surrender benefit

Surrender value payable shall be equal to the higher of Guaranteed Surrender Value (GSV) and Special Surrender Value (SSV)

Guaranteed Surrender Value (GSV)

- GSV shall be applicable only for policies where annuity deferment option is selected and the Surrender is during the annuity deferment period.
- For all other cases, there won't be any GSV applicable
- The GSV shall be calculated as:
- $GSV = GSV \text{ Factor} * \text{Annuity purchase price}$
- GSV factors are provided in the table below under Part F 'GSV Tables'

Special Surrender Value (SSV)

- SSV shall be equal to the Present Value (PV) of expected future benefits
- SSV shall be calculated using the following formula:

$$SSV = G3 * (G1 * \text{Annuity amount p.a.} + G2 * \text{Annuity Purchase price}) - \text{Annuity instalments paid during the year of Surrender}$$

Where, G1 is the Annuity factor, G2 is the Assurance factor and G3 is the discounting factor in the deferment period.
- The discount rate used in the computation of factors shall be derived with reference to the prevailing yields of 10-year G-Sec bonds basis the following formula:
Prevailing Yield on 10-year government bond with a spread, of not exceeding 50bps
- The applicable SSV shall be reviewed annually based on the prevailing yield on 10 Year G Sec and the underlying experience. The revised discount rate shall apply to all policies including the policies already sold.
