## Summary

---

Final year Computer Science student at IIIT Pune who loves to build things, full-stack web applications and backend services using React.js, Python, FastAPI, Node.js, and MongoDB. Interested in AI-powered software, Large Language Models, Retrieval-Augmented Generation (RAG), and scalable backend systems. Strong foundation in REST APIs, databases, Git-based development, and problem solving, with hands-on experience through hackathons and projects.

## Projects

---

### CruxGPT – AI Insurance Policy Assistant

Generative AI & Full-Stack Development

<https://cruxgpt.vercel.app>

- Built an AI-powered assistant for insurance policy analysis using Retrieval-Augmented Generation (RAG), enabling users to ask natural language questions over uploaded policy documents.
- Implemented semantic document retrieval using vector embeddings and Pinecone, improving response relevance by **27%** through context-aware retrieval.
- Developed scalable backend REST APIs using FastAPI to orchestrate document processing, retrieval, and GPT-4 based response generation, reducing retrieval latency by **15%**.
- Built a responsive React.js frontend for document upload and conversational interactions with AI-generated, context-aware responses.
- **Tech Stack:** Python, FastAPI, React.js, GPT-4 API, Retrieval-Augmented Generation (RAG), Pinecone, REST APIs, Git

### NeuroWall – AI-Powered Web Application Firewall

Backend Development

<https://github.com/inddivyansh/NEUROWALL>

- Developed scalable backend services and REST APIs using FastAPI to process HTTP requests, enforce security rules, and support AI-driven traffic analysis.
- Implemented authentication, request logging, anomaly detection, and modular API endpoints following clean backend architecture principles.
- Integrated PostgreSQL for persistent storage and containerized services using Docker to streamline development and deployment workflows.
- Collaborated using Git while working with React-based frontend components in a modular full-stack application.
- **Tech Stack:** Python, FastAPI, React.js, PostgreSQL, Docker, Git

### Apna Mandi – Bulk Ordering Marketplace

Full Stack Development

<https://apna-mandi-updated.vercel.app>

- Built a full-stack marketplace enabling vendors and customers to place, manage, and track bulk purchase orders through an intuitive React.js interface.
- Designed and developed REST APIs for authentication, product management, order processing, and analytics using Node.js, Express.js, and MongoDB.
- Implemented OAuth-based authentication, role-based access control, and optimized MongoDB queries to improve backend performance.
- Collaborated using Git and followed modular development practices for frontend and backend integration.
- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, OAuth 2.0, Git

## Technical Skills

---

**Languages:** Python, JavaScript, TypeScript (Basics), C++, SQL, Bash  
**Frontend:** React.js, HTML, CSS  
**Backend:** FastAPI, Node.js, Express.js, REST APIs, Authentication  
**AI & Machine Learning:** GPT-4 API, Retrieval-Augmented Generation (RAG), Pinecone, Pandas, NumPy, Scikit-learn, XGBoost  
**Databases:** MongoDB, PostgreSQL, MySQL  
**Cloud & DevOps:** AWS (EC2, S3, IAM), Docker, Git, GitHub, Linux, SSH  
**Developer Tools:** Postman, VS Code, Jupyter Notebook  
**Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming

## Research & Technical Experience

---

**Hackathon Experience** 2024 – Present

- **ISRO BAH 2025:** Developed Python-based data preprocessing and feature engineering pipelines for Aditya-L1 SWIS-ASPEX satellite telemetry. Collaborated in a multidisciplinary team to build and evaluate machine learning models, ranking among the **Top 10%** of 500+ participating teams.
- **Smart India Hackathon 2024:** Developed a full-stack web platform for India Post Philately services, contributing to backend APIs, database integration, and collaborative feature development using Git. Shortlisted among the **Top 15** teams during the college evaluation round.
- Worked in fast-paced team environments, collaborating through Git-based workflows, integrating backend services, debugging production issues, and delivering functional software within strict project deadlines.

## Education

---

|                                                                                                                  |                                          |
|------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| <b>Indian Institute of Information Technology Pune</b><br>B.Tech in Computer Science & Engineering    CGPA: 6.77 | Aug 2023 – May 2027<br>Pune, Maharashtra |
| <b>Nalanda Academy</b><br>Senior Secondary (CBSE)    84.80%                                                      | 2021 – 2022<br>Kota, Rajasthan           |
| <b>Nalanda Academy</b><br>Secondary (CBSE)    89.60%                                                             | 2019 – 2020<br>Kota, Rajasthan           |

## Achievements

---

**Competitive Programming** Ongoing

- Solved **300+** Data Structures & Algorithms problems across LeetCode, CodeChef, and Codeforces.
- Achieved a **LeetCode rating of 1573**, placing in the **Top 28%** globally.
- Earned a **2 CodeChef** rating (1468) with a **Global Rank of 1621** in Starters 225.

**Technical Competitions** 2025

- Secured **AIR 43** among **6000+** participants in the Naukri EROH 2025 AI Integration in Renewable Energy Case Study competition.
